

README file for files4web, for

Control Theory for Physicists
John Bechhoefer
Cambridge University Press, 2021

The compressed file “files4web.zip” contains Mathematica notebooks created for the book. They are organized by chapter. Each filename also states whether it pertains to a problem, an example, or to text in a section. Not all problems have files attached.

If you do not have Wolfram Mathematica, you can still open the files using their Wolfram Player, a free notebook reader available at <https://www.wolfram.com/player/?source=nav>

If you see any coding errors or have suggestions, please let me know.

Enjoy!

John Bechhoefer
